## THE FORMS WRITING MACHINE

This machine was especially designed to accommodate any type of forms — fan fold, continuous or pack. Its outstanding advantages include repeating front and back spacer, instant platen release, and automatic tabulator. This machine brings speed and economy to the preparation of routine paper work, and furnishes carbon copies for all departments.

## THE CARBON RIBBON WRITING MACHINE

For the preparation of distinct, uniform master copies for photographic reproduction, the International all-electric machine shown above is unsurpassed. Electrical operation assures uniform type impressions, and every character strikes on a fresh carbon ribbon surface. A 300-foot carbon paper ribbon eliminates frequent changing.

## THE GENERAL CORRESPONDENCE MACHINE

This modern all-electric machine ideally meets the needs of the busy modern office. It brings speed to the preparation of general correspondence, and assures the uniform attractive appearance of all letters. This machine also prepares as many as twenty carbon copies, and writes clean-cut stencils at electric typing speed.

## THE HEKTOWRITER

The International Hektowriter speeds up the preparation of "masters" for the hectograph liquid duplicating process. This machine, like the other Internationals, is fully electric powered and operated by a feather-light touch. The unique carbon ribbon carrier eliminates time and trouble in adjusting and placing sheets in proper position. This machine also effects a real saving in carbon paper costs.

International Electric Writing Machines are designed to fit the needs of any business. They are made in carriage lengths of from twelve to twenty-four inches and offer a wide choice of type faces. These machines are precision instruments made with the skill and care of other International Business Machines which are serving government and business in seventy-nine different countries.
